FIGURE 1B

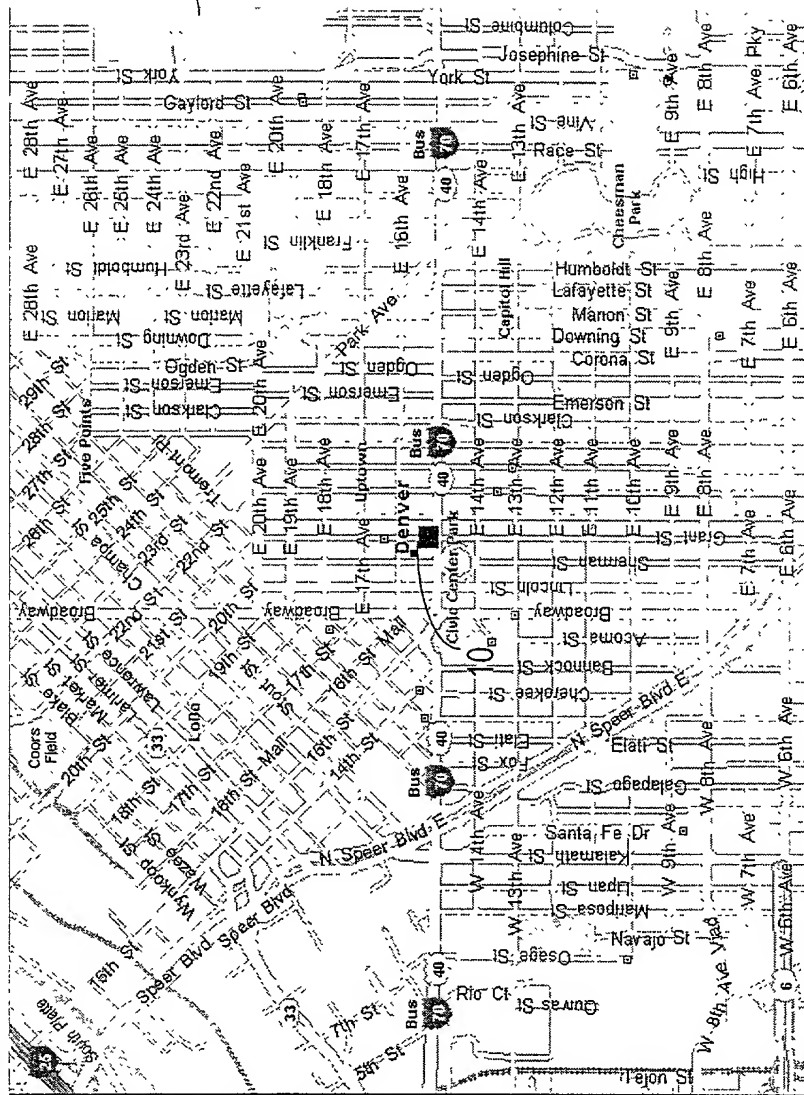

Figure 2 is a block diagram of a network management system 100 for a network 5. The system 100 includes a network management system side 20 and a network element (NE) side 10. The network management system side 20 includes a network element (NE) position manager 22, which includes a control unit 26, a transmitter/receiver unit 24, and a network element (NE) position display manager 22. The network element (NE) side 10 includes a network element (NE) locator 14, which includes a control unit 16, a transmitter/receiver unit 14, and a position data unit 18. A geographical position detector 30 is connected to the network element (NE) locator 14. A user interface (GUI) 50 is connected to the network element (NE) position manager 22. The network 5 is connected to the network element (NE) locator 14. A server 6 is connected to the network 5.
